2011 Maintenance Program

Funding Source – State Highway Fund and Act 176 Funds

The goal of the Maintenance Division is to preserve or improve the condition of the State Highway System through the effective and efficient use of the resources provided. The performance measures used to determine the level of service are defined in the Department's Maintenance Assessment Program (MAP). This program evaluates a statistical sample of 0.20 mile segments and determines the level of service for the maintenance of seven major system elements. Those elements and levels of service are:

<u>Maintenance Element</u>	<u>2009 LOS</u>	<u>Present LOS</u>	<u>Min. Acceptable LOS</u>
• Pavements	F	F	C
• Shoulders and ditches	C	C	C
• Drainage structures	D	D	C
• Roadsides	D	D	C
• Signs	C	D	C
• Pavement markings	D	F	C
• Guardrails	B	C	C

Note: This past year has seen a decrease in the level of service in signs, pavement markings, and guardrail. This is due in part to changes in the inspection process and cuts in the maintenance budget.

Levels of service (LOS) are defined as:

- **Level of Service A (best)** - This is a very high level of service in which the associated features are in excellent condition. Very few deficiencies are present, all systems are operational, and the overall appearance is pleasing. Preventive maintenance is a high priority in all maintenance activities.
- **Level of Service B (good)** - This is a high level of service in which the associated features are in good condition. Very few deficiencies are present in safety and investment protection, but moderate deficiencies may exist in other areas. All systems are operational. Preventive maintenance is a high priority for safety-related activities, but is deferred for other areas, resulting in additional corrective maintenance activities.
- **Level of Service C (fair)** - This is a fair maintenance service level in which the associated features are in fair condition. Very few deficiencies are present in safety related activities, but moderate deficiencies exist for investment protection and significant aesthetic related deficiencies. Preventive maintenance is deferred for many activities except safety-related work. Corrective maintenance is routinely practiced for all activities. A backlog of deficiencies begins to build up that will have to be dealt with eventually, at a higher cost. Some roadway structural problems begin to appear due to long-term deterioration of the system.

- **Level of Service D (poor)** - This is a low maintenance service level in which the associated features are in generally poor condition. Moderate deficiencies are present in safety-related activities and significant deficiencies for all other activities. Very little preventive maintenance is accomplished; maintenance becomes very reactionary and places emphasis on correcting problems as they occur. A backlog of deficiencies exists. Safety problems begin to appear that increase risk and liability, and significant structural deficiencies exist that accelerate the long-term deterioration of the system. The overall appearance of the system is poor.
- **Level of Service F (worst)** - This is a very low service level in which the associated features are in poor and failing condition. Significant deficiencies are present in all maintenance activities. The overall appearance is not aesthetically pleasing. Preventive maintenance is not practiced for any maintenance activities. Maintenance is totally reactive and places emphasis on correcting problems as they occur. Significant backlogs of maintenance deficiencies exist. Excessive safety problems occur.

The maintenance budget for fiscal year 2011 is \$333,360,615 and is comprised of the following three (3) basic categories:

- Routine maintenance activities
- Pavement improvement and preservation
- Statewide support
 - Extraordinary Maintenance
 - Maintenance Support
 - Big bridge maintenance
 - Maintenance equipment replacement
 - Rest area and welcome center maintenance
 - Beaver management program

Due to continued shortfalls in revenue, this budget represents a decrease of approximately 16 percent (\$62.6 million) over the 2010 budget. This level of funding falls significantly short in providing the maintenance needs necessary to provide a “C” level of service. The Maintenance Assessment Program indicates that to achieve a level of service “C” would require a level of funding equal to \$769 million. This would eliminate some of the backlog of maintenance items that presently exists. Once achieved, it would cost approximately \$743 million per year to maintain a “C” level of service. These numbers do not include the Department’s bridge replacement program that is presently approximately \$120 million. The categories are defined below.

Routine maintenance activities – consists of the everyday activities to maintain the state’s roads, bridges, and associated appurtenances at a given level of service. These activities are usually proactive planned activities but also include reactive activities that are in response to accidents, natural disasters and normal infrastructure deterioration. These activities are performed with Department and contract forces. Routine maintenance activities include, but are not limited to, signage of routes, pavement markings, replacement and installation of guardrail, repair and installation of traffic signals, chip seal and other pavement preventive maintenance activities, repair of existing sidewalks, mowing, repair of drainage structures, and shoulder and ditch maintenance.

Pavement improvement and preservation – the reconstruction, rehabilitation, and preservation of roads on the state highway system. Roads are selected for inclusion in the reconstruction and rehabilitation programs using data from the Department's Pavement Management System and other objective and quantifiable factors approved by the SCDOT Commission. Reconstruction usually includes the replacement of the entire pavement structure, while rehabilitation involves adding structural capacity to the pavement. Preservation includes the application of lower cost preventive maintenance treatments on pavements in good condition to preserve and extend the life of the pavement. Roads are selected for preventive maintenance by the resident maintenance engineer and approved by the district.

Statewide support

- Extraordinary maintenance – unforeseen major repairs to roads and bridges that are beyond the capabilities of the Department's maintenance forces to accomplish within their existing operating budget. This may also include participation in County or Municipal drainage projects or other infrastructure improvement projects that are within the Department's right-of-way.
- Maintenance support – includes environmental, hydraulic, and training contracts for things such as underground storage tank replacement, third party environmental audits, drainage studies, and employee training.
- Big bridge maintenance – includes the asset management contract for the Arthur Ravenell and other significant bridges in the Charleston area.
- Maintenance equipment replacement – includes the replacement of existing maintenance equipment such as dump trucks, motor graders, backhoes etc.
- Rest area and welcome center maintenance – includes utilities, cleaning services, landscape services, and building maintenance cost for the rest areas and welcome centers across the state.
- Beaver management program – includes the trapping and removal of beavers and beaver dams in eleven counties throughout the state. This program has proven very cost effective in preventing damage to roads and bridge structures due to flooding that occurs as a result of beaver activity. This program encompasses all activities associated with beaver management including: removal of beavers, removal of dams, private property agreements, monthly reports of activities, media communication, trapping permits, explosives permits, and environmental impact studies in accordance with the National Environmental Policy Act (NEPA).

Breakdown of FY 10-11 Operating Budget Total \$1,348.30

Engineering Districts

There are seven Engineering Districts in South Carolina. Each district is comprised of four to eight counties and may cover several congressional districts. Funding is distributed to the districts based not only on needs, but on the number of lane miles and vehicle miles traveled in each district. The needs based budget submitted by the districts totaled approximately \$436 million. Due to funding limitations it was necessary to develop the budget based on available funding and distribute to the districts based solely on the percentage of lane miles and vehicle miles traveled in each district.

The following is a summary of the projected District Programs.

Funding for Engineering Districts and Statewide Support	
District	Funding
One	\$36,746,868
Two	\$32,146,294
Three	\$28,476,453
Four	\$32,346,228
Five	\$40,058,830
Six	\$32,552,707
Seven	\$30,118,735
Statewide	\$20,914,500
	\$253,360,615
